

MATERIALS

INTRODUCTION

Materials are all around us. Everything we see and touch is made from materials. Some materials are soft, and some are hard. Some materials are natural, like wood and stone, while others are man-made, like plastic and metal.

MATERIALS AROUND US

Different materials are used for different things. For example, we use wood to make furniture and plastic to make toys. Materials help us build and create many things we need every day.

TYPES OF MATERIALS

There are many different types of materials. Some are natural, and some are man-made. Here are some examples:

- **Wood:** Wood comes from trees. It is used to make furniture, houses, and paper.
- **Metal:** Metal is a strong material used to make tools, cars, and buildings.
- **Plastic:** Plastic is a light material used to make toys, bottles, and bags.
- **Glass:** Glass is smooth and used to make windows, bottles, and jars.
- **Fabric:** Fabric is soft and is used to make clothes, blankets, and curtains.

USING MATERIALS

We use materials for many things in our daily life. Clothes are made from materials like cotton, wool, or polyester. Houses are made from materials like wood, brick, or stone. Toys are made from materials like plastic, metal, or wood. Materials are important because they help us make the things we need and use every day.
